

# SUPER-BLACK SERIES FOR POLYURETHANES

REPI's SUPER-BLACK is the series of black with very high concentration of carbon black, formulated on different carriers such as polyols and phthalate-free plasticizers.

Designed to meet the highest demands of the global PU market in terms of performance, this range consists of blacks formulated to offer perfect pigment distribution in PU, very high colouring power and low viscosity.

REPI's SUPER-BLACK range finds application in a variety of elastomers, PU foams (flexible, rigid, semi-rigid), integral skin, RIM, PIR.

Carbon Black concentration up to 50%

## KEY FEATURES

- ❖ Limited dosages with a high concentration of carbon black
- ❖ Very high colouring power
- ❖ Simple to mix in polyol systems
- ❖ Low viscosity and good flowability
- ❖ Small particles size
- ❖ Reduced filter cleaning times
- ❖ Long life
